## SOUTHERN YELLOW PINES

The term “southern yellow pines” principally refers to Longleaf, Shortleaf, Slash, and Loblolly pine trees. The Georgia Forestry Commission’s Flint River Nursery offers improved selections of Loblolly, Slash, and Shortleaf pines. These improved selections offer larger yields in volume, disease resistance, and other gains in physical properties such as straightness. For detailed information on the performance ratings of our improved Loblolly, please visit our webpage at [www.gatrees.org/Reforestation/](http://www.gatrees.org/Reforestation/).

All GFC tree seedlings are adapted to Georgia’s unique climate and soils. They have been cultured to provide fibrous root systems, large stem diameter, and abundant energy reserves to ensure the best possible growth and survival.

# SEEDLINGS - PINE

	Name	Description	per 1000	per 500	per 50
<b>LOBLOLLY</b>	<b>GEORGIA GIANTS</b>	This mix of three of the fastest-growing, open-pollinated loblolly pine families in the Southeast are expected to produce 53.5% more volume age age six; excellent rust resistance; good straightness. Recommended for Coastal Plain only.	<b>\$78</b>	<b>\$49</b>	<b>\$30</b>
	<b>C-3 HIGH VOLUME</b>	This 3rd cycle Loblolly variety is a small seed orchard mix of a few families that produce 48% more volume per acre at age six as compared to local unimproved checklots. It is just under our famous Georgia Giants in volume production, and is suitable for the coastal plain, and lower piedmont.	<b>\$73</b>	<b>\$46</b>	<b>\$27</b>
	<b>ELITE STRAIGHT</b>	This is a mix of three of the straightest, most fusiform rust resistant seedlings from our 3rd cycle selections. These seedlings, through field progeny testing have proved to grow extremely straight, with very low incidence of rust. They also produce 36% more volume per acre at age six.	<b>\$73</b>	<b>\$46</b>	<b>\$27</b>
	<b>SELECT P3 LOBLOLLY</b>	Selected families from a third cycle piedmont orchard expected to produce more than twice as much volume at age six than unimproved loblolly with superb rust resistance. Recommended for north of the Fall Line.	<b>\$70</b>	<b>\$46</b>	<b>\$27</b>
	<b>RR3 LOBLOLLY</b>	This third cycle loblolly is projected at age six to yield 23% more volume than unimproved sources. Fusiform rust-resistant. Recommended for Lower Piedmont and Coastal Plain.	<b>\$61</b>	<b>\$39</b>	<b>\$23</b>
<b>SLASH</b>	<b>SUPER SELECT PREMIUM SLASH</b>	From our genetically superior Slash Pine seed orchards we now offer this super volume producing Slash Pine. It produces an astounding 58% more volume per acre at 15 years old. It also has superb resistance to fusiform rust.	<b>\$73</b>	<b>\$46</b>	<b>\$27</b>
	<b>SELECT PREMIUM SLASH</b>	These trees represent the best families "selected" from the Premium Slash population. They will produce 36% more volume on high rust hazard sites.	<b>\$65</b>	<b>\$46</b>	<b>\$27</b>
	<b>PREMIUM PLUS SLASH</b>	The Premium Plus Slash produces 32% more volume per acre at age 15 in comparison with unimproved sources on sites where fusiform rust hazard is expected to be high. This selection also gives you the added benefit of Pitch Canker Resistance.	<b>\$60</b>	<b>\$39</b>	<b>\$25</b>
<b>OTHER PINES</b>	<b>LONGLEAF</b>	80-120 ft. in height. Does best in well-drained, acidic, sandy soils. Most distinctive of yellow pines with its long clustered needles and large pine cones. It is considered a fire wise species showing fire resistance even in the grass stage.	<b>\$100</b>	<b>\$60</b>	<b>\$41</b>
	<b>SHORTLEAF (2ND GENERATION)</b>	These shortleaf pine seedlings are from 2nd cycle selections. 80-100ft. in height. Generally found on dry upland sites.	<b>\$60</b>	<b>\$37</b>	<b>\$28</b>

## HARDWOODS

The Georgia Forestry Commission offers a generous variety of hardwood species. Included among these are several native oak species such as Northern Red Oak and White Oak. Oak varieties provide food for wildlife, abundant shade, and beautiful seasonal colors. Other fruit-bearing trees, such as Persimmon or Crabapple, are also favored by growers seeking to establish food plots for wildlife.

Additionally, the nursery's catalog includes many other ornamental and flowering trees that are popular in Georgia landscapes. Flint River Nursery's inventory is well-suited to meet the needs of customers engaged in large reforestation efforts or small projects.

# SEEDLINGS - HARDWOODS

<b>OAKS</b>	Name	Description
	<b>LIVE OAK</b>	Quercus Virginiana, also known as the Southern Live Oak is an evergreen oak tree native to the Southeastern United States. This is an iconic figure in the South, and is our state tree in Georgia. Typical open grown trees can reach 65.5 feet, with a limb spread of nearly 88.5 feet.
	<b>NORTHERN RED</b>	Moderate to fast growing oak found in the mountains and piedmont;80-100 ft. in height.Best on deep well-drained loams.
	<b>SAWTOOTH</b>	50-60 ft. in height. Though non-native, grows well in eastern states producing large acorn crops as early as age 6.
	<b>SWAMP CHESTNUT</b>	Medium oak in the white oak family; 60-80 ft. in height. Produces quality wood and sweet acorns for wildlife.
	<b>WHITE</b>	Large, long-lived oak reaching 80-100 ft in height. Valued for high quality wood and food source for wildlife.
	<b>WILLOW</b>	This deciduous tree, in the Red Oak family is moderately fast growing, and grows to be between 65 and 98 ft. tall. It is important for both shade, ornamental, and wildlife. It prolifically produces acorns that are important to a wide variety of animals. Acorn production, on average, usually starts earlier than most native Oak species. Willow oaks are becoming widely popular in urban plantings in large cities such as Atlanta and Washington D.C.

<b>FRUIT</b>	<b>CRABAPPLE</b>	Small tree or shrub, 20-30 ft. in height. Ornamental and food source for wildlife. Performs best on moist soils.
	<b>PERSIMMON</b>	Small to medium sized tree found on a variety of sites. Produces sweet, edible fruit. Popular wildlife food source.
	<b>WILD PLUM</b>	Thicket forming shrub, or small tree. Produces red or yellow fruit in early summer. Valuable wildlife food source.

<b>FLOWER</b>	<b>CREPE MYRTLE</b>	Small tree or shrub that produces flowers ranging from white to pinkish-red. Blooms last 60-120 days.
	<b>DOGWOOD</b>	Small understory tree rarely reaching 40 ft. in height. Beautiful white flowers in the spring and shiny red seeds in the fall.
	<b>REDBUD</b>	Small ornamental tree or shrub prized for its purplish pink blooms in early spring. Grows well in wide range of sites.

## ALL HARDWOOD SPECIES\*\*

<b>PRICE</b>	per 10	per 50	per 250	per 500
	<b>\$35</b>	<b>\$55</b>	<b>\$160</b>	<b>\$210</b>

**\*\* PLEASE NOTE: ONLY ONE SPECIES IS ALLOWED PER PACKAGE.**

# HARDWOODS (Continued)

<b>ORNAMENTAL</b>	Name	Description
	<b>BALD CYPRESS</b>	Deciduous tree reaching 100-150 ft. in height. It is often found in areas characterized by frequent and prolonged flooding.
	<b>CATALPA</b>	Small ornamental tree bearing white or purple-tinted flowers. It is frequently host to caterpillars that are used as fishing bait.
	<b>RED CEDAR</b>	Medium sized evergreen. Makes excellent hedge, blind, or windbreak. Among top species for Christmas tree plantings.
	<b>RED MAPLE</b>	At maturity, these trees average 60-90 ft. in height. Fast growing ornamental with nice colors nearly year round.
	<b>RIVER BIRCH</b>	This favored ornamental tree adapts to a wide variety of sites. It's natural habitat is wet ground, but will grow fine on higher ground as well. It matures to be a medium sized tree.
	<b>THUJA</b>	Small tree growing 20-25 ft. in height. It has a dense, pyramidal shape that can become more open as the tree matures. The foliage is green to yellow-green and is similar in appearance to the Leyland Cypress. It is often used to create hedgerows, but may also be used as a specimen tree.
	<b>WAX MYRTLE</b>	Evergreen shrub or small tree; 12-15 ft. in height. Provides wildlife cover. Persistent seeds popular food source for birds.
	<b>YELLOW POPLAR</b>	Large tree often exceeding 100 ft. in height. Wood valuable for variety of uses. Showy flowers and beautiful foliage.

## ALL HARDWOOD SPECIES

<b>PRICE</b>	per 10	per 50	per 250	per 500
	<b>\$35</b>	<b>\$55</b>	<b>\$160</b>	<b>\$210</b>

**\*\*PLEASE NOTE: ONLY ONE SPECIES IS ALLOWED PER PACKAGE.**

<b>SPECIAL</b>	<b>POLLINATOR PACKAGE</b>		Per Package
	5 Dogwood, 5 Red Maple, 5 Yellow Poplar		<b>\$65</b>
This special package is designed to create native habitats for vital pollinator animal species such as bees.			

# SEEDLING CARE

*Although the quality of trees has been greatly improved through research in recent years, survivability of seedlings depends largely on care taken in storing, transporting, and planting.*

## STORING

1. At delivery, inspect the packages of seedlings before accepting and make sure your order is correct. Check for damages. Then unload immediately.
2. Minimize storage time, especially early in the season.
3. Do not wash or shake gel from seedling roots. Gel applied to roots at the nursery prevents drying out during transport and decreases transplanting shock.
4. Do not prune the roots of packed seedlings. Seedlings need every single tiny root to absorb moisture and nutrients from the ground, so the more root surface the better the growth. If some seedlings have roots that are excessively long, remove them individually, and trim slightly.
5. Do not allow seedlings to dry out from wind or sun. Ample moisture is a key factor.
6. Allow air to circulate to prevent heating when in packages. Bags/bales should not be stacked over two deep per layer unless spacers providing 2-4" of air space are used.
7. Avoid temperature extremes. Fluctuations in temperature, especially excessive heat, during storage and transportation can result in seedling trauma.
8. Do not attempt to plant seedlings that have been *thoroughly* frozen in the pack. Slightly frozen seedlings, however are acceptable and should be thawed naturally. Do not handle seedlings before they are completely thawed.

## TRANSPORTING

1. Do not transport seedlings in truck beds containing fertilizer, chemical, or fuel residues.
2. Protect seedlings from weather extremes with a light colored tarp to shade. At least 12" of air space should be left between tarp and the top of bags/bales.
3. Handle with care to avoid damaging root systems and predisposing seedlings to stress.
4. Avoid extended transport time.

## PLANTING

1. Plant seedlings within a two week period after acceptance.
2. Plant when soil is moist.
3. Plant seedlings during cooler temperatures as they are more conducive to seedling survival and healthy growth. (Suggested planting season: December 1 to March 1)
4. When hand planting, carry plants to site in container with sufficient mud, sawdust, or wet moss to cover and keep seedling roots moist.
5. Remove only a single seedling at a time when hand planting or enough seedlings from planter tray for immediate use.
6. Plant seedlings deeply. The correct planting depth should be at least as deep as the plant grew in the nursery. Greater exposure to the soil and its water content - even one-half inch of added depth of planting - significantly improves the survival rates of the seedlings.
7. Use mechanical planting if possible. Although slightly more expensive, planting mechanically yields better results and is an investment that pays off. Make sure the machine is properly adjusted to get the proper planting depth and to avoid J-rooting.

# ORDERING INFORMATION

- The Georgia Forestry Commission begins taking seedling orders on June 1, 2018 for the following planting season (December through February).
- To order:
  - Visit our online store at [www.gaseedlings.org](http://www.gaseedlings.org);
  - Visit your local GFC office. (See our public website, [www.gatrees.org](http://www.gatrees.org) for listings);

OR

  - Contact the Flint River Nursery at (478) 508-0056.
- Payments must accompany each order.
- Sales tax must be assessed to each order. The sales tax is determined by **county of delivery**. See page 10 for a map of current tax rates by county.
- Discounts are available for orders of 100,000 pines or 10,000 hardwoods. Contact the nursery for additional information.
- For orders totaling \$1,000 or more, a 10% down payment will reserve the order until November 15, at which time full payment must be received.
- No refunds on orders cancelled after November 15.
- Weekly deliveries to GFC offices begin the first week of December and continue through February for PINE species. Deliveries begin the first week of January and continue through February for HARDWOOD species. (See map on page 11 for route schedule.)
- Report problems with seedling quality or quantity to your local Georgia Forestry Commission office immediately.

## ABOUT OUR SEEDLINGS

*All Georgia Forestry Commission seedlings are adapted to Georgia's unique climate and soils. They have been cultured to provide a fibrous root system, large stem diameter, and abundant energy reserves to ensure the best possible survival and growth. They should be planted as soon as possible. Until planting, keep the seedlings cool and moist. Provide air circulation and protect from heat, freezing, and drying conditions.*
